(54) Title: METHOD OF VIDEO IMAGE PROCESSING

(57) Abstract: A method of video image processing comprises receiving a video signal (5,6) carrying input information representing moving images occupying an area (12) of display, processing the received input information and generating an output video signal (10,11) carrying output information representing moving images occupying the area (12) of display. It is characterised by re-scaling a section of the moving images represented by the input information occupying a selected section (17,18) of the area (12) of display independently of parts (14) of the moving images occupying the remainder of the area (12) of display.
